

NAISS All-Hands: Sensitive data

Group session

NAISS SENS: a brief history

2016

SNIC SENS started. Bianca (200 nodes, no GPU) and Castor (Gluster) built, as well as Irma+Lupus for NGI.

2018

GDPR went into effect. Cygnus purchased to address problems with Castor.

2019

GPU nodes added. SIMPLER moved in. Tryggve.

2020

Original end-of-life for Bianca passes.

2021

Irma+Lupus replaced by Miarka+Vulpes.

2022

SNIC ends, NAISS starts.

2024

Cygnus finally fully in production. General DPA almost ready.

NAISS SENS: the near future

Bianca to sunset as soon as Maja is ready, ideally 2024-12-31.

Maja (and sibling system Pelle) delivery is delayed by 2 months, so it might be tight. Bianca will run until Maja is ready.

Maja has NAISS funding through 2026.

Arrhenius Sensitive to be built 2025.

Discussion points

- Support
- Software
- AI/ML
- Allocation
 - On Arrhenius: TB-h?
- Interactions with other TRE
- Interfaces with other systems more generally
- Sensitive data on less secure systems
